FLYING FISH CHALLENGE

=====

Let's say you are working for a company called Flying Fish that aims to deliver fresh Fish & Chips directly from sea-side locations on the coast of the UK to consumers living in London via drones.

For our React coding evaluation, please follow the below React Native test, where we will be asking you to build a very simple application in Expo's online emulator.

If you haven't used React Native before no worries, just try your best.

This application should:

- Allow the user to search and select a restaurant from 10 fictitious restaurants (use made-up, local data)
- Select between cod & halibut fish and have the ability to add mushy peas to your order
- Type in your delivery address, name, and any special delivery instructions
- Does not need to do anything on "submit"

Use Expo Snack to write and share code:

<https://snack.expo.io>

Let me know if you have any questions along the way.
